QUESTION 1

What is the Iterator process?

A. Iterator is the process that simulates distribution in case of Appliance failure

B. Iterator is the process that follow Appliance recovery and simulates what was a distribution if recovered Appliance was alive

C. Iterator is the process that runs on the Orchestrator and calculates a distribution in case of Appliance failure

D. Iterator is the process that runs on the Orchestrator and calculates a distribution in case of Appliance recovery

Correct Answer: B

Iterator is the process that follows Appliance recovery and simulates what was a distribution if recovered Appliance was alive. The Iterator process runs on the Security Management Server and simulates the distribution of the Security Gateways if the recovered Appliance was alive. This helps ensure that the network remains secure and the traffic flow is optimized.

QUESTION 2
