QUESTION 1

Scenario: For auditing requirements, NetScaler administrators are required to use their Active Directory accounts to log on to NetScaler. All NetScaler administrators belong to the NSAdmins Active Directory group. Which configuration must an administrator create in NetScaler to meet the requirements of the scenario?

- A. User accounts
- B. NSAdmins group
- C. Authorization policy
- D. Service Groups policy

Correct Answer: B

QUESTION 2

A Citrix Administrator needs to mask the server name used by a web server, without exposing the web server virtual directory structure.

Which policy should the administrator use to complete this task?

- A. Responder
- B. Content Filtering
- C. Content Switching
- D. URL Transformation

Correct Answer: D

QUESTION 3

Scenario: An administrator configured a AAA virtual server. The AAA virtual server is NOT yet bound to a traffic management virtual server.

Which two virtual servers could the administrator configure as traffic management virtual servers? (Choose two.)

- A. GSLB
- B. Load balancing
- C. Content switching
- D. NetScaler Gateway

Correct Answer: BC

QUESTION 4

Which two steps must a Citrix Administrator complete to set up an SSL vPN virtual server? (Choose two.)

- A. Bind a session policy.
- B. Install a certificate-key pair.
- C. Bind a certificate-key pair to the virtual server.
- D. Configure a Secure Ticketing Authority server.

Correct Answer: BC

QUESTION 5

Scenario: An administrator needs to configure a NetScaler to provide access to users on an Exchange platform. The users will only use the IMAP4 protocol.

Which three features should the administrator configure for this scenario? (Choose three.)

- A. SSL Offload
- B. Compression
- C. Load balancing
- D. Health monitoring
- E. Integrated caching
- F. Route health injection

Correct Answer: ACD
