QUESTION 1

You are working on a new design for an API. The backend API will set the customer to a deleted status. The customer will remain in the backend database for later cleanup. The customer can no longer be retrieved by the API once the status is set.

Which method should be used at the Apigee proxy to set the deleted status?

A. GET

B. PUT

C. POST

D. DELETE

E. OPTIONS

Correct Answer: A

QUESTION 2

Which is a benefit of 2-way TLS (mutual TLS) for target endpoint connections?

A. Sensitive data presented to end users will be encrypted

B. Certificates can be used to verify the identity of both Apigee Edge and the target endpoint

C. End users can use the name of the system to verify that they are connecting to a trusted system.

D. All of the above

Correct Answer: B

QUESTION 3

You have a single back end that needs to be exposed to customers using different API request and response payloads You need to allow these different request types without breaking existing implementations What should you do?

A. Create a new API proxy for new customers and invoke backend target system with required parameters.

B. Configure the API as a pass-through proxy and invoke backend target system with client request parameters.

C. Create a new proxy xml and base path with upgraded version and invoke backend target system with required parameters

D. Include a new customer requirement in an existing API proxy and invoke backend target system with required parameters.

Correct Answer: C

QUESTION 4
