QUESTION 1

What does the Side-by-Side extensibility option mean?

- A. SAP S/4HANA extensions are context-aware and focused on tight integration.
- B. There are two SAP S/4HANA instances: one for standard code and another for custom developments.
- C. Extensibility is based on the SAP Business Transformation Platform (BTP) and published APIs.
- D. Reporting is transferred to an enterprise data warehouse based on SAP BW/4HANA

Correct Answer: C

C is correct because extensibility based on the SAP Business Technology Platform (BTP) and published APIs is what the Side-by-Side extensibility option means. Side-by-Side extensibility is a type of extensibility that allows customers to create custom applications or extensions that run on a separate platform, such as SAP BTP, and communicate with the SAP S/4HANA system via published APIs. Side-by-Side extensibility enables customers to enhance their SAP S/4HANA solution without modifying the core code or configuration, and to leverage the capabilities of SAP BTP, such as cloud services, development tools, or integration options. Verified References:[Extensibility Options for SAP S/4HANA], page 9

QUESTION 2

When conducting an upgrade of an SAP S/4HANA Cloud, public edition three system landscape, in which phase are the Business Roles updated?

- A. Explore
- B. Realize
- C. Deploy
- D. Discover

Correct Answer: A

A is correct because in the Explore phase, the Business Roles are updated when conducting an upgrade of an SAP S/4HANA Cloud, public edition three system landscape. The Business Roles are the roles that define the access rights and authorizations for the users in the system. The Business Roles are updated to reflect the changes and enhancements that are introduced by the upgrade, such as new apps, features, or functions. QUESTION 3

Which tool do you use to configure SAP S/4HANA Cloud, public edition?

- A. IMG (Implementation Guide)
- B. SAP Cloud ALM

- C. SAP Central Business Configuration
- D. SAP Solution Manager

Correct Answer: C

C is correct because SAP Central Business Configuration is the tool that you use to configure SAP S/4HANA Cloud, public edition. It provides a guided configuration process that helps you to activate your system, enter configuration data, and validate your settings. Verified References:Central Business Configuration Overview

QUESTION 4

Your customer is using a non-SAP ERP system and decides to implement SAP S/4HANA. Which of the following options are available to your customer?Note: There are 3 correct answers to this question.

- A. System Conversion SAP S/4HANA
- B. New Implementation SAP S/4HANA Cloud, public edition
- C. System Conversion SAP S/4HANA Cloud, private edition
- D. New Implementation SAP S/4HANA Cloud, private edition
- E. New Implementation SAP S/4HANA

Correct Answer: BDE

B is correct because New Implementation SAP S/4HANA Cloud, public edition is one of the options that are available to a customer who is using a non-SAP ERP system and decides to implement SAP S/4HANA. It involves setting up a new SAP S/4HANA Cloud system with predefined configuration and data migration from the legacy system. D is correct because New Implementation SAP S/4HANA Cloud, private edition is one of the options that are available to a customer who is using a non-SAP ERP system and decides to implement SAP S/4HANA. It involves setting up a new SAP S/4HANA Cloud system with customized configuration and data migration from the legacy system. E is correct because New Implementation SAP S/4HANA is one of the options that are available to a customer who is using a non-SAP ERP system and decides to implement SAP S/4HANA. It involves setting up a new SAP S/4HANA on-premise system with tailored configuration and data migration from the legacy system. QUESTION 5

What is the objective of a sprint retrospective meeting?

- A. Improve the Scrum process.
- B. Provide formal feedback to the Project Manager.
- C. Define the stakeholder management approach
- D. Review and prioritize the backlog.

Correct Answer: A

A is correct because improving the Scrum process is the objective of a sprint retrospective meeting. The sprint retrospective meeting is a time for the Scrum Team to reflect on how they worked together in the last sprint and identify ways to enhance their effectiveness and efficiency.
