

# C\_BW4H\_2404<sup>Q&As</sup>

SAP Certified Associate - Data Engineer - Data Fabric

**Pass SAP C\_BW4H\_2404 Exam with 100% Guarantee**

Free Download Real Questions & Answers **PDF** and **VCE** file from:

[https://www.geekcert.com/c\\_bw4h\\_2404.html](https://www.geekcert.com/c_bw4h_2404.html)

100% Passing Guarantee  
100% Money Back Assurance

Following Questions and Answers are all new published by SAP Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

Which data deletion options are offered for a standard DataStore object (advanced)? Note: There are 3 correct answers to this question.

- A. Deletion of all data from active table only
- B. Request-based data deletion
- C. Selective deletion of data
- D. Deletion of data from all tables
- E. Selection deletion including data of subsequent targets

Correct Answer: ABC

---

### QUESTION 2

Which external hierarchy properties can be changed in the query definition? Note: There are 3 correct answers to this question.

- A. Position of child nodes
- B. Expand to level
- C. Time dependency
- D. Sort direction
- E. Allow temporal hierarchy join

Correct Answer: ABD

---

### QUESTION 3

What is required before you can integrate an HDI Calculation View (data category Dimension) into another HDI Calculation View (data category Cube with Star Join) of the same HDI container?

- A. Create a synonym for the HDI Calculation View (data category Dimension).
- B. Build the design time file of the HDI Calculation View (data category Dimension) to generate a runtime object.
- C. Create a synonym for the HDI Calculation View (data category with Star Join).
- D. Build the runtime object of the HDI Calculation View (data category Cube with Star Join) to generate a design time file.

Correct Answer: B

---

#### QUESTION 4

What is the request handling default setting for error handling in a data transfer process (DTP) in SAP BW/4HANA?

- A. Request is set to failed, error stack is written, and valid records are updated
- B. Request is canceled, records are not tracked, and target is not updated
- C. Request is set to success, error stack is written, and valid records are updated
- D. Request is canceled, first incorrect record is tracked, and target is not updated.

Correct Answer: B

---

#### QUESTION 5

Which disadvantages should you keep in mind when you set the High Cardinality flag for a characteristic? Note: There are 2 correct answers to this question.

- A. You cannot use navigation attributes for this characteristic
- B. You cannot load more than 2 billion master data records for this characteristic
- C. SID numbers are created at runtime which might negatively affect the reporting performance
- D. You cannot use this characteristic as a navigation attribute for another characteristic.

Correct Answer: AC

You cannot use navigation attributes for this characteristic: This is a disadvantage of setting the High Cardinality flag for a characteristic. A characteristic with high cardinality cannot be used as a navigation attribute for another characteristic, and therefore it cannot have navigation attributes itself.

SID numbers are created at runtime which might negatively affect the reporting performance: This is a disadvantage of setting the High Cardinality flag for a characteristic. A characteristic with high cardinality has no persistent SID values and no SID table, which means that the SID numbers are generated on the fly during query execution. This can have a negative impact on the reporting performance, especially if the characteristic is used in filters or aggregations.
