QUESTION 1

What does the "Open Integration" principle of the SAP Integration Suite mean?

- A. SAP Integration Suite allows SAP-to-SAP integrations.
- B. SAP Integration Suite by default supports integrations to other SAP soft-ware.
- C. SAP Integration Suite by default supports third-party software integration.

Correct Answer: C

The "Open Integration" principle of the SAP Integration Suite means that SAP Integration Suite by default supports third-party software integration. The SAP Integration Suite is an open and modular iPaaS that allows you to integrate any system or application, regardless of whether it is from SAP or not. The SAP Integration Suite provides various connectors, adapters, APIs, and pre-built integrations that enable you to connect to third-party software with ease and flexibility. QUESTION 2

What kind of editor can you use to manipulate integration flows?

- A. Code editor
- B. Graphical editor
- C. Command-line editor

Correct Answer: B

To manipulate integration flows, you can use a graphical editor that is provided by SAP Integration Suite. The graphical editor allows you to visualize and edit your integration flows using a drag-and-drop interface. It also provides a palette of icons that represent different integration components and actions, such as senders, receivers, routers, mappers, transformers, and so on. You can use the graphical editor to design and configure complex integration scenarios in a user-friendly way. QUESTION 3

You want to implement a synchronous call to a remote HTTP API as an integration flow component. Which adapter can you use?

- A. OData
- B. Mail
- C. AMQP
- D. SFTP

Correct Answer: A

You can use an OData adapter to implement a synchronous call to a remote HTTP API as an integration flow component. An OData adapter allows you to send and receive messages using the OData protocol. OData stands for Open Data Protocol and is a standard for exposing and consuming data over HTTP or HTTPS. You can use an OData adapter to communicate with OData services that support CRUD (Create, Read, Update, Delete) operations on resources. QUESTION 4

What can you do in the Cloud Integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question

- A. Connect to different cloud runtime environments.
- B. Connect to multiple endpoints.
- C. Develop custom adapters.
- D. Develop complex integration scenarios in Python.

Correct Answer: BC

In the Cloud Integration capability within SAP Integration Suite, you can do the following things:

Connect to multiple endpoints. You can use various adapters and protocols to connect to different systems and applications, such as SAP S/4HANA, Salesforce, SuccessFactors, and more.

Develop custom adapters. You can use the Adapter Development Kit (ADK) to create your own adapters for specific integration scenarios and requirements. References: Integration Software | SAP Integration Suite, Modernize Integration with

SAP Integration Suite | openSAP

QUESTION 5

In the Cloud Integration capability within SAP Integration Suite, which internal message format is used?

- A. XML
- B. JSON
- C. XSLT

Correct Answer: A

In the Cloud Integration capability within SAP Integration Suite, XML is the internal message format that is used. XML stands for Extensible Markup Language and is a standard format for representing structured data. All messages that are processed by the Cloud Integration capability are converted to XML internally and then transformed to the desired format at the outbound channel.
