QUESTION 1

What are the key capabilities of the SAP BTP Integration Suite? Note: There are 2 correct answers to this question.

- A. API Management
- B. Connectivity Service
- C. Open Connectors
- D. SAP Business Application Studio

Correct Answer: AB

The key capabilities of the SAP BTP Integration Suite include API Management and Connectivity Service. API Management allows you to create, publish, monitor, and secure APIs across different environments and platforms. Connectivity Service enables you to establish secure and reliable connections between cloud applications and on-premise systems using various protocols and adapters. QUESTION 2

What does the messaging model of the Apache Camel Data Model consist of?

- A. Header, Exchange ID, in-message
- B. Header, body, attachment
- C. Header, body, properties
- D. Header, properties, attachment

Correct Answer: B

The messaging model of the Apache Camel Data Model consists of three parts: header, body, and attachment. The header contains information related to the message, such as addressing, routing, or metadata. The body contains the payload or the content of the message. The attachment contains optional data that can be attached to the message, such as files or images. The Apache Camel Data Model is used by SAP Integration Suite to process messages of any format using various components and data formats. QUESTION 3

Using the Test Connectivity function, you want to test a connection to a backend system. The connection is provided by a Cloud Connector. Which parameter is required for the connection test?

- A. Connector ID
- B. Host
- C. Location ID

D. Subaccount ID

Correct Answer: C

To test a connection to a backend system that is provided by a Cloud Connector, you must specify the location ID as a parameter for the connection test. The location ID is a unique identifier that represents a Cloud Connector instance in a specific network location. It is used to route requests from SAP Integration Suite to the correct Cloud Connector instance and then to the backend system. You can find the location ID in the Cloud Connector administration UI under Configuration Location ID. QUESTION 4

What are some advantages of creating an OData interface through an API provider? Note: There are 2 correct answers to this question.

- A. Automatic creation of a WSDL specification
- B. Automatic creation of a RAML specification
- C. Automatic creation of a Swagger UI
- D. Automatic creation of an openAPI specification

Correct Answer: CD

Some advantages of creating an OData interface through an API provider are automatic creation of a Swagger UI and an openAPI specification. A Swagger UI is a web-based tool that allows you to interact with the OData service and test its functionality. An openAPI specification is a standard format for describing the OData service and its metadata, which can be used by other tools and applications. QUESTION 5

What does an API consumer do?

- A. It provides the server-side implementation of an interface.
- B. It invokes an interface.
- C. It provides an interface.

Correct Answer: B

An API consumer is an application or system that invokes an interface provided by an API provider. An API consumer uses the interface to access or manipulate data or functionality exposed by the API provider. An API consumer can be a web browser, a mobile app, a cloud service, or any other client that can send requests and receive responses from an API provider.
