QUESTION 1

How does SAP HANA encrypt the data persistence layer?

- A. By row level
- B. By page level
- C. By column level
- D. By table level

Correct Answer: B

QUESTION 2

What actions can you perform using the SAP_FIORI_FOUNDATION_S4 task list? Note: There are 3 correct answers to this question.

- A. Schedule a job for calculation of SAPUI5 application index.
- B. Generate SAP Fiori foundation roles.
- C. Replicate backend catalogs.
- D. Enable SAP GUI for HTML.
- E. Create users with generated business roles.

Correct Answer: BCD

QUESTION 3

Under which Java System Properties category do you find an AS Java-based Manager in the SAP NetWeaver Administrator (NWA)?

- A. Kernel
- B. VM Environment
- C. Applications
- D. Services

Correct Answer: A

QUESTION 4

Which app types require SAP HANA as system database? Note: There are 2 correct answers to this question.

- A. Analytical apps
- B. Fact sheet apps
- C. Classic applications
- D. Transactional apps

Correct Answer: AB

According to the SAP Fiori App Types and Database Requirements document¹, analytical apps and fact sheet apps require SAP HANA as system database. Analytical apps provide insight into the real-time operations of the business by collecting and displaying analytic information and indicators, such as KPIs, directly in the browser. Fact sheet apps display contextual information and key facts about central objects used in the business operations. Both types of apps consume data immediately from the SAP HANA database, mainly through search models. Transactional apps and classic applications, on the other hand, can run on any database supported by the SAP NetWeaver Application Server ABAP. QUESTION 5

Which of the following actions can be executed in transaction Edit Profile Parameters (RZ11)? Note: There are 2 correct answers to this question.

- A. Display the value of individual profile parameters
- B. Download values of all profile parameters in one step
- C. Set new values for profile parameters in profile files
- D. Change values of dynamic profile parameters

Correct Answer: AD

Transaction Edit Profile Parameters (RZ11) allows you to display and change the value of individual profile parameters. You can also use this transaction to display the documentation for each parameter and its possible values. However, you cannot use this transaction to download values of all profile parameters in one step, or to set new values for profile parameters in profile files. To download all profile parameters, you can use transaction Download Profiles (RZ10). To set new values for profile parameters in profile files, you can use transaction Profile Maintenance (RZ10) or the Config Tool.
