### QUESTION 1

Where do you define 'Roles' requested via resource plans?

- A. No need to define it differently, they are same as system roles.
- B. Roles under system security.
- C. Under skill management modules.
- D. Resource roles under resource management.

Correct Answer: D

According to the Assigning Resource Roles document, you define 'Roles' requested via resource plans under resource roles in the Resource Management application. Resource roles are the roles that users can request or allocate for resource plans. The other options are not correct, as they are not the places where you define 'Roles' requested via resource plans. The system roles are the roles that grant access to various applications and modules in the system. The roles under system security are the roles that control the security settings and permissions for the system. The skill management modules are the modules that manage the skills and skill levels of users and groups.

---

### QUESTION 2

When copying a source project to a target project, what fields are copied by default?

Choose 3 answers

- A. Planned dates.
- B. Duration fields.
- C. Number.
- D. Short description.
- E. State

Correct Answer: ABD

---

### QUESTION 3

In which table can you find cost information for a specific fiscal period?

- A. cost\_plan\_breakdown
- B. pm\_project
- C. cost\_plan
- D. expense\_line

Correct Answer: A

According to the ServiceNow documentation, the `cost_plan_breakdown` table stores the cost information for a specific fiscal period. This table contains the fields such as cost plan, fiscal period, amount, and currency. The other options are incorrect because:

B. `pm_project`: The `pm_project` table stores the information about projects, such as name, description, state, and status.

C. `cost_plan`: The `cost_plan` table stores the information about cost plans, such as name, type, and project.

D. `expense_line`: The `expense_line` table stores the information about expense lines, such as expense type, amount, and date.

#### QUESTION 4

Which is the minimum role that has access to the Project Administration > Settings > Preferences-Project module?

A. `it_program_manager`

B. `sys_admin`

C. `it_project_manager`

D. `it_pps_admin`

Correct Answer: D

According to the ServiceNow documentation<sup>1</sup>, the `it_pps_admin` role is the minimum role that has access to the Project Administration > Settings > Preferences-Project module. This role can configure the project preferences, such as the default project template, the default project currency, and the default project status.

The other options are incorrect because:

A. `it_program_manager`: The `it_program_manager` role can create and manage programs, but not project preferences.

B. `sys_admin`: The `sys_admin` role can access all modules and features on the platform, but it is not the minimum role required for the Project Administration > Settings > Preferences-Project module.

C. `it_project_manager`: The `it_project_manager` role can create and manage projects, but not project preferences.

### QUESTION 5

What is a data copy of the current project's task, schedule, or structure that can be used for comparison reporting later?

- A. Accrual
- B. Commitment
- C. Baseline
- D. Forecast

Correct Answer: C

A baseline is a data copy of the current project's task, schedule, or structure that can be used for comparison reporting later. A baseline captures the original plan of the project and allows you to track the changes and deviations from the plan over time. You can create multiple baselines for a project and compare them with the current state of the project. You can find more information about baselines in the Product Documentation for ServiceNow.
