QUESTION 1

What limitation exists when WMM is not enabled on an 802.11n WLAN? Response:

- A. The maximum channel-width will be 20MHz
- B. Only two ACs will be available
- C. EDCA values will change
- D. 802.11 QoS will not be available

Correct Answer: D

QUESTION 2

In high-density environments, such as stadiums and convention centers, what extra factor has to be taken into account that can attenuate Wi-Fi signals when these environments are having an event?

- A. Thick walls
- B. I-Beams
- C. People
- D. Fire doors

Correct Answer: C

QUESTION 3

Given: As the wireless network administrator for XYZ Company, you are planning to upgrade your aging wireless network infrastructure, as well as some clients, to support 802.11ac.

In your research, you have discovered that your new wireless client devices and infrastructure are 802.11ac, WMM, and WMM-PS certified by the Wi-Fi Alliance. Some of your existing client devices are 802.11a/b/g devices that do not support WMM.

Given this information, what scenario is possible when your company's employees begin using both types of client devices on the new WLAN?

Response:

- A. All WMM-PS certified client devices will be prevented from utilizing WMM-PS features until all stations in use on the wireless medium are WMM-PS certified.
- B. Performance and battery life will be inconsistent between WMM-PS and non-WMM-PS client devices when used with applications that support WMM-PS.

C. The WLAN infrastructure will set the dozing times of the WMM-PS certified client devices based upon their WMM access category, while the non-WMM-PS client devices will continue to use PSpoll frames.

D. WMM-PS enabled APs will allow both WMM-PS and non-WMM-PS stations to use the triggerand- delivery mechanism, but WMM-PS stations will g

Correct Answer: B

QUESTION 4

How are EAP messages transported over 802.11 wireless LANS? Response:

A. EAP-Fast

B. PEAP

C. EAPOL

D. EAP_TLS

Correct Answer: C

QUESTION 5

When deploying a new WLAN infrastructure using PoE to power the APs, you realize that a known good AP is not powering up. You use the same cable to connect your laptop and connect without any trouble. What is the most likely reason the AP did not power up?

A. Missing AP licenses in the controller

B. Spanning-tree convergence

C. Layer 3 routing

D. Lack of PoE budget on the switch

Correct Answer: D
