QUESTION 1

In a multiple channel architecture (MCA) network supporting 802.1X authentication, what aspect of WLAN design affects client roaming efficiency and effectiveness?

A. PHY standard used by the AP

B. Key caching protocols

C. Cipher suite

D. PHY standard used by client

Correct Answer: B

QUESTION 2

Using a SCA means that all APs will be using the same channel in a given layer. How is the AP with which the client associates determined?

A. All APs share a virtual IP address. A controller will tell the closest AP to the client to communicate with it, since it has a greater RSSI from the client.

B. All APs share a virtual Multicast Address. A controller will tell the closest AP to the client to communicate with it, since it has a greater RSSI from the client.

C. All APs share a virtual BSSID. A controller will tell the closest AP to the client to communicate with it, since it has a greater RSSI from the client.

D. The client selects the AP based on a known set of MAC to BSSID mappings stored in the clients authorized SSID listing.

Correct Answer: A

QUESTION 3

In a convention center, you have received complaints about the WLAN infrastructure. At this moment, the are only two APs in one auditorium. After analyzing the situation, you determined that there are more client devices that the infrastructure was designed for. There are only two APs to support more than 300 devices using the Wi-Fi at the same time. What should you do to make the Wi-Fi work as expected?

A. Redesign the entire WLAN

B. Quickly add more APs

C. Upgrade the Ethernet connections to MultiGig

D. Turn up the output power on the APs so that they can handle more clients

Correct Answer: A

QUESTION 4

iPerf is a tool used in site surveys and validation surveys for what purpose? Response:

A. RSSI tracking

B. CCI detection

C. Throughput testing

D. Data rate mapping

E. Signal strength mapping

Correct Answer: C

QUESTION 5

When performing an indoor predictive site survey to make the WLAN planning and design cycle more efficient, what is a best practice for configuration of the simulated APs in the predictive modeling software?

Response:

A. Always use the default 2.2 dBi omnidirectional antenna patterns for simulated APs.

B. If dynamic RRM will be used, AP transmit power should be set to an estimated average level of the expected client devices, such as 25 mW.

C. All simulated APs should be set to 20 MHz channels only.

D. Defining custom AP and antenna patterns will yield more accurate prediction data than the pre-configured vendor AP/antenna combinations.

Correct Answer: B
