QUESTION 1

What set of factors are used to calculate the disk service time of a hard disk drive?

- A. Seek time Rotational latency Data transfer rate
- B. Seek time Rotational latency I/O operations per second
- C. Seek time Rotational latency RAID level
- D. Seek time Rotational latency Bandwidth

Correct Answer: A

QUESTION 2

What is true about an OSD storage system?

- A. Numerous objects can be stored in a single file system folder of OSD.
- B. Objects are created based on the name and location of the file.
- C. One object can be placed inside another object to save storage space.
- D. Objects contain user data, related metadata, and user defined attributes of data.

Correct Answer: D

QUESTION 3

What is an advantage of deploying intelligent storage systems in the data center?

- A. Enables efficient and optimized storage and management of information
- B. Reduces the complexity of managing information by creating silos of storage
- C. Reduces the amount of data to be replicated, migrated, and backed up
- D. Migrates data from a data center to the cloud at no cost

Correct Answer: A

QUESTION 4

What is the purpose of data archiving?

- A. Transfers xed content that is actively accessed to archive storage
- B. Transfers dynamic content that is no longer actively accessed to archive storage
- C. Transfers dynamic content that is actively accessed to archive storage
- D. Transfers xed content that is no longer actively accessed to archive storage

Correct Answer: D

QUESTION 5

An Ethernet switch has eight ports and all ports must be operational for 24 hours from Monday through Friday. However, failures of Port 6 occur within the week as follows:

Tuesday = 6 AM to 8 AM Thursday = 5 PM to 10 PM Friday = 7 AM to 9 AM

What is the MTBF of Port 6?

- A. 32 hours
- B. 37 hours
- C. 30 hours
- D. 40 hours

Correct Answer: B
