QUESTION 1

Where do you activate SAP Best Practices from Cloud ALM to be used during the fit-to-standard workshops for SAP S/4HANA Cloud Public Edition?

- A. Quality System
- B. Development System
- C. Production System
- D. Starter System

Correct Answer: D

In the context of SAP S/4HANA Cloud Public Edition, SAP Best Practices are activated from the Starter System during the fit-to-standard workshops. The Starter System in SAP S/4HANA serves as a preliminary, fully configured system that allows project teams to explore and understand SAP functionalities, configure business processes, and make necessary adjustments before these are moved to the production environment. It is crucial during the initial stages of implementation to help in aligning the standard SAP solutions with the organization's business processes. The activation of these practices in the Starter System ensures that the project team can test and validate processes without affecting the live business operations that occur in the production system, or ongoing development in the development system

QUESTION 2

What is the purpose of "Scrum of Scrums"?

- A. To run an integration meeting across the various teams
- B. To create an alternative Scrum process for larger teams
- C. To conduct a regular review of risk and issues
- D. To gather requirements from business users

Correct Answer: A

The purpose of the "Scrum of Scrums" meeting is:

To run an integration meeting across the various teams: This meeting facilitates coordination and collaboration among multiple Scrum teams working on different parts of the same project. It aims to address integration points and

dependencies between the teams, ensuring that the project progresses smoothly and cohesively.

The Scrum of Scrums is a scaling mechanism in Agile methodologies to handle the complexities when multiple teams are involved, acting almost like a synchronization meeting for leaders or representatives from each team.

QUESTION 3

What are potential use cases for SAP Cloud ALM? Note: There are 2 correct answers to this question.

- A. Upgrading SAP S/4HANA Public Edition
- B. Implementing SAP Ariba
- C. Upgrading SAP Success Factors
- D. Implementing Tricentis Test Automation

Correct Answer: AB

Potential use cases for SAP Cloud ALM include:

Upgrading SAP S/4HANA Public Edition: SAP Cloud ALM supports the upgrade processes by providing tools and resources needed for a smooth and efficient upgrade experience.

Implementing SAP Ariba: This tool facilitates the implementation of SAP Ariba by helping manage project tasks, configurations, testing, and deployment effectively. Option C (Upgrading SAP SuccessFactors) and D (Implementing Tricentis

Test Automation) are not typically highlighted as direct use cases for SAP Cloud ALM, as SAP Cloud ALM specifically supports SAP solutions and their lifecycle management directly rather than third-party tools like Tricentis.

QUESTION 4

In which phase do you create "an ordered list of everything that is known to be needed in the product"?

- A. Prepare
- B. Discover
- C. Realize
- D. Explore

Correct Answer: D

In the SAP Activate methodology, "an ordered list of everything that is known to be needed in the product" is typically created in the:

Explore phase: During this phase, the project team works to define the detailed scope of the project, including creating comprehensive lists of requirements that capture all that is needed in the product. This includes both functional and

nonfunctional requirements which are documented and agreed upon to guide subsequent project activities.

Options A (Prepare), B (Discover), and C (Realize) involve other types of planning and implementation activities, but the detailed scope definition and requirement listing are central to the Explore phase.

QUESTION 5

What are the capabilities of Task Management application in SAP Cloud ALM with SAP Activate methodology tasks?

Note: There are 3 correct answers to this question.

- A. Change description of SAP Activate task
- B. Launch SAP Cloud ALM apps to perform SAP Activate task
- C. Create sub-tasks to break down the SAP Activate task
- D. Delete SAP delivered SAP Activate tasks
- E. Assign SAP Activate task to a team member

Correct Answer: BCE

The capabilities of the Task Management application in SAP Cloud ALM when managing SAP Activate methodology tasks include:

Launch SAP Cloud ALM apps to perform SAP Activate task: This allows users to directly access and utilize different SAP Cloud ALM applications necessary for performing specific SAP Activate tasks, integrating workflow and tools.

Create sub-tasks to break down the SAP Activate task: This feature supports the breakdown of larger tasks into more manageable sub-tasks, facilitating detailed tracking and assignment of specific components of a task to different team members.

Assign SAP Activate task to a team member: Enables project managers and team leads to assign tasks directly to team members within the SAP Cloud ALM environment, ensuring clear task delegation and responsibility. Option A (Change

description of SAP Activate task) and D (Delete SAP delivered SAP Activate tasks) are not typically features supported by the Task Management application in SAP Cloud ALM, as these tasks and their core descriptions are usually predefined

and integral to the methodology.
