QUESTION 1

You are cleaning up sandbox environments for a company.

The company requires data to be cleared from the environments each time an extension is published.

You need to configure the launch.json file.

Which schemaUpdateMode property should you set?

A. ForceUpgrade

B. ForceSync

C. Synchronize

D. Recreate

Correct Answer: D

In the context of cleaning up sandbox environments for a company where data needs to be cleared each time an extension is published, the schemaUpdateMode property in the launch.json file should be set to Recreate (D). Setting this property to Recreate ensures that every time the extension is published, the existing tables and data are dropped, and then the tables are recreated based on the current extension\\'s schema. This mode is particularly useful in development and testing environments where you need a clean slate for testing each version of the extension without the remnants of previous data affecting the outcomes. It\\'s important to use this setting cautiously, as it results in the loss of all existing data in the tables defined by the extension, which is suitable for a sandbox environment but not for production environments.

QUESTION 2

You need to call the Issue API action from the mobile application.

Which action should you use?

A. POST /issues(88122e0e-5796-ec11-bb87-000d3a392eb5)/Microsoft.NAV.copy

B. PATCH /issues(88122e0e-5796-ec11-bb87-000d3a392eb5)/Microsoft.NAV.Copy

C. POST /issues(88122e0e-5796-ec11-bb87-000d3a392eb5)/Copy

D. POST /issues(88122e0e-5796-ec11-bb87-000d3a392eb5)/copy

E. POST /issues(88122e0e-5796-ec11-bb87-000d3a392eb5)/Microsoft.NAV.Copy

Correct Answer: E

Use the POST action.

Use Microsoft.NAV in the URL.

End the URL with Copy, not copy.

Scenario: The IT department creates a custom API for exposing the custom Issue table. The API provides an action for copying an issue to a new table. The action is defined as follows:

Contoso, Ltd. must create an API in Business Central to expose item details to the mobile application.

The API must have the lowest possible impact on the production environment when used during working hours.

The API must only support Get operations.

QUESTION 3

DRAG DROP

A company is examining Connect apps and Add-on apps for use with Business Central. You need to describe the development language requirements for Connect apps and Add- on apps.
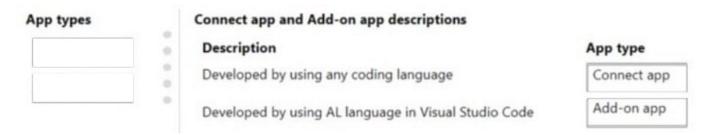

How should you describe the app language requirements? To answer, move the appropriate app types to the correct descriptions. You may use each app type once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

App types		Connect app and Add-on app descriptions	
		Description	**App type**
Add-on app		Developed by using any coding language	
Connect app		Developed by using AL language in Visual Studio Code	

Correct Answer:

App types		Connect app and Add-on app descriptions	
		Description	**App type**
		Developed by using any coding language	Connect app
		Developed by using AL language in Visual Studio Code	Add-on app

Developed by using any coding language: Connect app Developed by using AL language in Visual Studio Code: Add-on app

In Microsoft Dynamics 365 Business Central, there are distinct types of applications that can be developed: Connect apps and Add-on apps. Each has its own development language requirements:

Connect apps:

Add-on apps:

The language and environment used for developing these apps are key differentiators between Connect apps and Add-on apps.

QUESTION 4

You create a page with the PageType property set to RoleCenter.

You navigate through the different sections of the page.

You need to add functionalities to the page.

What should you do?

A. Define actions in the area (reporting) before actions in the area (creation).

B. Define the navigation menu in the area(processing).

C. Define the navigation bar in the area (embedding).

D. Add a source table on the Role Center page.

Correct Answer: A

When creating a page with the PageType property set to RoleCenter in Microsoft Dynamics 365 Business Central, it\\'s essential to organize the functionalities and actions in a manner that enhances user experience and efficiency. The best practice is to define actions in the area (reporting) before actions in the area (creation) (A). This organization allows users to access reporting and analytical features quickly, which are commonly used in Role Centers for overview and insight purposes, before moving on to creation or transactional tasks. This logical flow aligns with typical user workflows, where analysis and review precede the creation of new records or transactions. The other options, such as defining the navigation menu in the area(processing) (B), defining the navigation bar in the area (embedding) (C), or adding a source table on the Role Center page (D), do not directly address the need to add functionalities to the Role Center page in a user- friendly manner.

QUESTION 5

HOTSPOT

You have the following XML file sample for the Items list:

```
<Items>
  <Item No="1000">
    <Description>Table</Description>
  </Item>
  <Item No="1001">
    <Description>Chair</Description>
  </Item>
  <Item No="1002">
    <Description>Sofa</Description>
  </Item>
</Items>
```
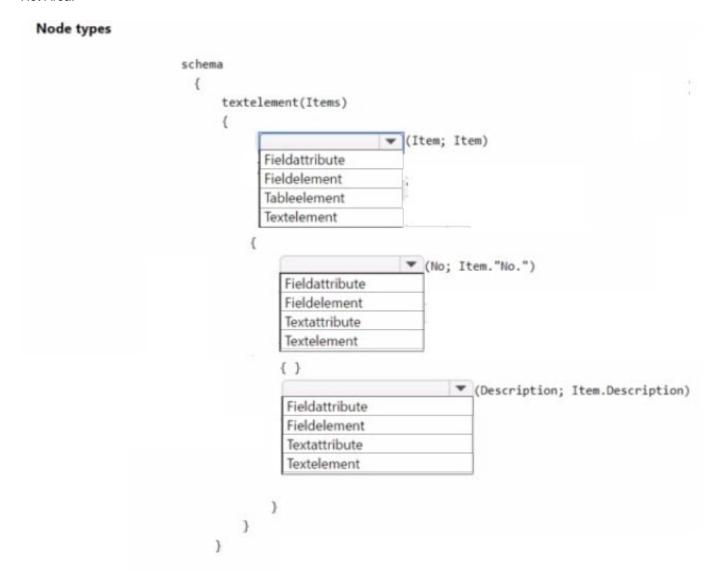

You plan to create the next XML file by using an XMLport object. You need to complete the code segment to export the file in the required format How should you complete the code segment? To answer, select the appropriate options in the answer area.

Hot Area:

Node types

```
schema
  {
    textelement(Items)
    {
      [_____▼] (Item; Item)
        Fieldattribute
        Fieldelement
        Tableelement
        Textelement
      {
        [_____▼] (No; Item."No.")
          Fieldattribute
          Fieldelement
          Textattribute
          Textelement
        { }
          [_____▼] (Description; Item.Description)
            Fieldattribute
            Fieldelement
            Textattribute
            Textelement
      }
    }
  }
```

Correct Answer:

Node types

```
schema
{
    textelement(Items)
    {
        [Tableelement ▼]  (Item; Item)
            Fieldattribute
            Fieldelement
            Tableelement
            Textelement
        {
            [Fieldelement ▼]  (No; Item."No.")
                Fieldattribute
                Fieldelement
                Textattribute
                Textelement
            { }
            [Fieldelement ▼]  (Description; Item.Description)
                Fieldattribute
                Fieldelement
                Textattribute
                Textelement
        }
    }
}
```
