MULESOFT-INTEGRATION-ASSOCIATE Exam Questions

2 / 5

QUESTION 1

According to MuleSoftwhat is a major distinguishing characteristic of an application network m relation to the integration of systems, data, and devices?

A. It uses a well-organized monolithic approach with standards

B. It is built for change and self-service

C. It leverages well-accepted internet standards like HTTP and JSON

D. It uses CJ/CD automation for real-time project delivery

Correct Answer: B

An application network, as envisioned by MuleSoft, is designed to be dynamic and self-service, enabling rapid adaptation to changing business needs.

3 / 5

Which interaction composition pattern did the integration architect who designed this order processing API use?

A. Multicasting

B. Orchestration

C. Streaming

D. Aggregation

Correct Answer: B

In an API-led connectivity approach, different APIs are layered to provide modular and reusable services. For an order processing API that coordinates stateful interactions with various microservices, the integration architect used the orchestration interaction composition pattern. QUESTION 4

Which AnypointPlatform component should a MuleSoft developer use to create an API specification prior to building the API implementation?

A. MUnit

B. API Designer

C. Runtime Manager

D. API Manager

Correct Answer: B

Creating an API specification before building the API implementation is a critical step in API development. MuleSoft\'s API Designer is the tool designed for this purpose.

References:

MuleSoft Documentation: API Designer

API Design Best Practices: Designing APIs

QUESTION 5

What are two reasons why a typical MuleSoft customer favors a MuleSoft-hosted AnypointPlatform runtime plane over a customer-hosted runtime for its Mule application deployments? (Choose two.)

A. Reduced time-to-market for the first application

B. Reduced application latency

C. Reduced IT operations effort

D. increased application isolation
