### QUESTION 1

Which key DevOps practice and associated Anypoint Platform component should a MuleSoft integration team adopt to improve delivery quality?

- A. Automated testing with MUnit
- B. Passive monitoring with Anypoint Monitoring
- C. Continuous design with API Designer
- D. Manual testing with Anypoint Studio

Correct Answer: A

To improve delivery quality, a key DevOps practice is automated testing. Within the Anypoint Platform, MUnit is the tool specifically designed for this purpose.

References:

MuleSoft Documentation: MUnit

DevOps Practices: MuleSoft DevOps

---

### QUESTION 2

A platform architect includes both an API gateway and a service mesh in the architecture of a distributed application for communication management.

Which type of communication management does a service mesh typically perform in this architecture?

- A. Between services within the application
- B. Between application services and the firewall
- C. Between the application and external API clients
- D. Between the application and external API implementations

Correct Answer: A

A service mesh is typically used to manage communication between microservices within a distributed application.

Service Mesh Overview: What is a Service Mesh?

Service Mesh vs. API Gateway: Service Mesh and API Gateway Comparison

---

### QUESTION 3

---

A Kubernetes controller automatically adds another pod replica to the resource pool in response to increased application load

Which scalability option is the controller implementing?

- A. Horizontal
- B. Down
- C. Diagonal
- D. Vertical

Correct Answer: A

Kubernetes offers several scalability options to handle varying application loads. The scenario described involves adding another pod replica in response to increased load, which is a form of horizontal scaling.

Kubernetes Documentation: Horizontal Pod Autoscaling  
Kubernetes Scalability: Understanding Kubernetes Scaling

---

#### QUESTION 4

Which AnypointPlatform component should a MuleSoft developer use to create an API specification prior to building the API implementation?

- A. MUnit
- B. API Designer
- C. Runtime Manager
- D. API Manager

Correct Answer: B

Creating an API specification before building the API implementation is a critical step in API development. MuleSoft's API Designer is the tool designed for this purpose.

References:

MuleSoft Documentation: API Designer

API Design Best Practices: Designing APIs

---

#### QUESTION 5

- A. If the access token is compromised, the client credentials do not have to be reissued
- B. If the client ID is compromised it can be exchanged for an API key
- C. If the access token is compromised it can be exchanged for an API key

D. If the client secret is compromised, the client credentials do not have to be reissued

Correct Answer: A

OAuth 2.0 provides a more secure and flexible way of handling API authentication compared to API keys.

References:

OAuth 2.0 Framework: OAuth 2.0

MuleSoft Security Best Practices: API Security
