QUESTION 1

A company's security team has requested that all IT resources be hardened.

What should an administrator do to increase the security of the Nutanix environment?

- A. Enable Cluster Lockdown
- B. Enable Prism Central KMS
- C. Enable Flow
- D. Enable STIG

Correct Answer: D

To increase the security of a Nutanix environment in response to a request from a company's security team, an administrator can Enable STIG (Security Technical Implementation Guide)

QUESTION 2

An administrator is upgrading a current three-node Nutanix cluster with new HCI nodes. Currently, the environment is based on a Single two-unit chassis hosted in one cabinet.

By simply changing the system form factor, what new level of resiliency may this customer achieve?

- A. Rack awareness
- B. Block awareness
- C. Metro Availability
- D. Better replication factor

Correct Answer: B

QUESTION 3

How would an administrator upgrade the LCM framework to the latest version?

- A. Run LCM pre-checks
- B. Settings/Upgrade Software
- C. Run LCM inventory
- D. Run an NCC health check

Correct Answer: B

To upgrade the LCM framework to the latest version, the administrator must go to the Settings page of the Prism

Central UI, and then select the Upgrade Software option. This will show the available versions of the LCM framework, and allow the administrator to select the desired version and upgrade. Reference:

QUESTION 4

Which tool provides diagnostic system data for Nutanix to deliver proactive support? (Choose Correct answer and give explanation/References from Nutanix Certified Associate (NCA) v6.5 official study resources)

- A. NCC
- B. Cluster Heart
- C. Pulse
- D. Cluster health

Correct Answer: C

Pulse is a built-in tool that periodically collects and sends diagnostic data to Nutanix support for proactive monitoring and troubleshooting. This data includes cluster configuration, performance metrics, and error logs, among other things.

Nutanix support can use this data to identify and resolve issues before they become critical, and to provide recommendations for optimizing cluster performance. NCC (Nutanix Cluster Check) is another tool provided by Nutanix, but it is used

for performing manual health checks and diagnostics on the cluster, rather than providing proactive support.

Cluster Heart and Cluster Health are not tools provided by Nutanix, and are not relevant to this question.

QUESTION 5

What happens to images that are imported into Prism Central?

- A. Copied to the Prism Central image repository
- B. Remain in the source cluster after import
- C. Copied to all clusters managed by Prism Central
- D. Deleted from the source cluster after import

Correct Answer: A

The Prism Central image repository is a centralized location for storing virtual machine images that can be used to deploy VMs to any cluster managed by Prism Central. When an image is imported into Prism Central, a copy of the image is made and stored in the repository, so that it can be easily accessed and deployed to any cluster as needed. The original image file typically remains in the source cluster after it is imported into Prism Central, unless it is explicitly deleted. Similarly, the image copy in the Prism Central repository is not automatically copied to all clusters managed by Prism Central, but can be used to deploy new VMs on any cluster as needed.
