QUESTION 1

Which protocols are supported by Files?

A. SMBv2 SMBv3, NFSv2, NFSv3

B. SMBv1. SMBv2, NFSv2, NFSv3

C. SMBv1. SMBv2, NFSv3, NFSv4

D. SMBv2 SMBv3, NFSv3, NFSv4

Correct Answer: D

Explanation: The protocols that are supported by Files are SMBv2, SMBv3, NFSv3, and NFSv4. SMB (Server Message Block) is a protocol that allows clients to access files, printers, and other resources on a network. NFS (Network File System) is a protocol that allows clients to access files on a remote server as if they were local. Files supports both SMB and NFS protocols for creating shares and exports that can be accessed by different types of clients. QUESTION 2

An organization currently has two Objects instances deployed between two sites. Both instances are managed via manage the same Prism Central to simplify management.

The organization has a critical application with all data in a bucket that needs to be replicated to the secondary site for DR purposes. The replication needs to be asynchronous, including al delete the marker versions.

A. Create a Bucket replication rule, set the destination Objects instances.

B. With Object Browser, upload the data at the destination site.

C. Leverage the Objects Baseline Replication Tool from a Linus VM

D. Use a protection Domain to replicate the objects Volume Group.

Correct Answer: A

Explanation: The administrator can achieve this requirement by creating a bucket replication rule and setting the destination Objects instance. Bucket replication is a feature that allows administrators to replicate data from one bucket to another bucket on a different Objects instance for disaster recovery or data migration purposes. Bucket replication can be configured with various parameters, such as replication mode, replication frequency, replication status, etc. Bucket replication can also replicate all versions of objects, including delete markers, which are special versions that indicate that an object has been deleted. By creating a bucket replication rule and setting the destination Objects instance, the administrator can replicate data from one Objects instance to another asynchronously, including all delete markers and versions. QUESTION 3

What tool can be used to report on a specific user\'s activity within a Files environment?

A. Prism Element Alerts menu

B. Prism Central Activity menu

C. Data Lens Audit Trails

D. Files Console Usage

Correct Answer: C

Explanation: The tool that can be used to report on a specific user\\'s activity within a Files environment is Data Lens Audit Trails. Data Lens Audit Trails is a feature that provides detailed logs of all file operations performed by users on Files shares and exports, such as create, read, write, delete, rename, move, copy, etc. Data Lens Audit Trails can help administrators track and audit user actions and identify any unauthorized or malicious activities. The administrator can use Data Lens Audit Trails to filter and search for a specific user\\'s activity based on various criteria, such as file name, file type, file size, file path, file share, file server, operation type, operation time, operation status, and so on. QUESTION 4

What is a mandatory criterion for configuring Smart Tier?

A. VPC name

B. Target URL over HTTP

C. Certificate

D. Access and secret keys

Correct Answer: D

Explanation: Smart Tier requires access and secret keys to authenticate with the target storage tier, which can be Nutanix Objects or any S3-compatible storage service. The access and secret keys are generated by the target storage service and must be provided when configuring Smart Tier3. References: Nutanix Files Administration Guide3

QUESTION 5

Which ransomware prevention solution for Files is best when the list of malicious file signatures to block is greater than 300?

A. Third-party solution

B. Flow Security Central

C. Data Lens

D. File Analytics

Correct Answer: A

Explanation: Nutanix Files provides a built-in ransomware prevention feature that allows administrators to block malicious file signatures from being written to the file system. However, this feature has a limit of 300 signatures per

share or export. If the list of malicious file signatures to block is greater than 300, a third-party solution is recommended2. References: Nutanix Files Administration Guide2
