### QUESTION 1

An administrator has enabled Service Access on FortiManager. What is the purpose of Service Access on the FortiManager interface?

- A. Allows FortiManager to run real-time debugs on the managed devices.
- B. Allows FortiManager to respond to requests for FortiGuard services from FortiGate devices.
- C. Allows FortiManager to automatically configure a default route.
- D. Allows FortiManager to download IPS packages.

Correct Answer: B

---

### QUESTION 2

Refer to the following exhibit:

```
config system global
set workspace-mode normal
end
```

Which of the following statements are true based on this configuration? (Choose two.)

- A. Unlocking an ADOM will submit configuration changes automatically to the approval administrator.
- B. Unlocking an ADOM will install configuration changes automatically on managed devices.
- C. Ungraceful closed sessions will keep the ADOM in a locked state until the administrator session times out.
- D. The same administrator can lock more than one ADOM at the same time.

Correct Answer: CD

---

### QUESTION 3

An administrator would like to authorize a newly-installed AP using AP Manager. What steps does the administrator need to perform to authorize an AP?

- A. Authorize the new AP using AP Manager and wait until the change is updated on the FortiAP. Changes to the AP's state do not require installation.
- B. Changes to the AP's state must be performed directly on the managed FortiGate.
- C. Authorize the new AP using AP Manager and install the policy package changes on the managed FortiGate.

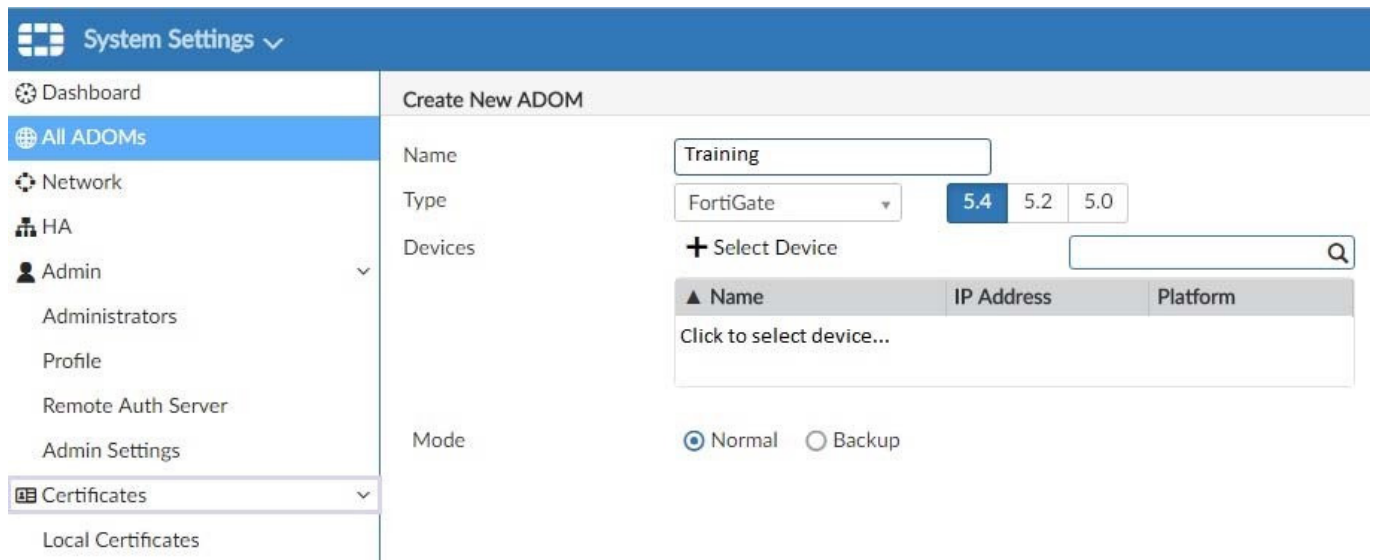

D. Authorize the new AP using AP Manager and install the device level settings on the managed FortiGate.

Correct Answer: A

#### QUESTION 4

View the following exhibit:

Which of the following statements are true regarding when ADOM is set as Normal mode on the FortiManager? (Choose two.)

- A. Cannot assign the same ADOM to multiple administrators
- B. Supports FortiManager script feature
- C. FortiManager automatically installs the configuration difference in revisions on the managed FortiGate
- D. Allows making configuration changes for managed devices on FortiManager panes

Correct Answer: CD

#### QUESTION 5

An administrator has configured the following command on FortiManager:

```
config system dm
set rollback-allow-reboot enable
end
```

A configuration change has been installed from FortiManager to the managed FortiGate that causes the FGFM tunnel to

go down for more than 15 minutes. What is the purpose of this command?

- A. It allows FortiGate to reboot and recover the previous configuration from its configuration file.
- B. It allows FortiGate to unset central management settings.
- C. It allows the FortiManager to revert and install a previous configuration revision on the managed FortiGate.
- D. It allows FortiGate to reboot and restore a previously working firmware image.

Correct Answer: A
