QUESTION 1

Which input to Phase A provides context for the architecture work by describing the needs and ways of working of the enterprise?

- A. Business principles, goals, and drivers
- B. Architecture Vision
- C. Architecture Roadmap
- D. Architecture Principles

Correct Answer: A

Explanation: This answer is based on the TOGAF Standard, Version 9.2 - Phase A: Architecture Vision 1, which states that "Business principles, business goals, and strategic drivers of the organization are already defined elsewhere in the enterprise. If so, the activity in Phase A is involved with ensuring that existing definitions are current, and clarifying any areas of ambiguity. Otherwise, it involves defining these essential items from scratch." Business principles, goals, and drivers provide context for the architecture work by describing the needs and ways of working of the enterprise. They define the desired outcomes, the guiding values, and the strategic direction of the enterprise. They also help to align the architecture work with the business strategy and objectives. The other options are not correct, as they do not provide context for the architecture work in Phase A.

QUESTION 2

In what TOGAF ADM phase is the Information map translated into data models?

- A. Phase A
- B. Phase E
- C. Preliminary Phase
- D. Phase C

Correct Answer: D

Explanation: his answer is based on the TOGAF Standard, Version 9.2 - Phase C:

Information Systems Architectures 2, which states that "The objective of Phase C is to develop Target Information Systems (Data and Application) Architecture descriptions that will enable the enterprise to address the Request for Architecture

Work and stakeholder concerns." In this phase, the Information Map is translated into data models that describe the structure and relationships of the data entities required by the enterprise. The data models are part of the Data Architecture,

which is one of the two components of the Information Systems Architecture. The other options are not correct, as they are not phases where the Information Map is translated into data models.

QUESTION 3

In which pan of a business scenario are business capabilities and value streams modelled?

- A. When identifying and documenting desired outcomes
- B. When identifying the business and technology environment
- C. When identifying the human actors
- D. When identifying, documenting and ranking the problem

Correct Answer: B

Explanation: This answer is based on the TOGAF Standard, Version 9.2 - Business Scenarios , which states that "The business and technology environment is a description of the current situation in terms of business processes (including business capabilities), people (including skills), information (including data), applications (including software), infrastructure (including hardware), and governance (including standards)." Business capabilities and value streams are modeled when identifying the business and technology environment, as they provide a high-level view of what the business does or can do, and how it delivers value to its stakeholders. The other options are not correct, as they are not parts of a business scenario where business capabilities and value streams are modeled.

QUESTION 4

Complete the sentence. An objective of Phase B is to identify candidate architectureRoadmap components based upon_____.

- A. the Architecture Requirements Impact Assessment
- B. the Architecture Vision created in Phase
- C. gaps between the Baseline and Target Business Architectures
- D. a cross-mapping of Value Stream Stages to Business Capabilities

Correct Answer: C

Explanation: This answer is based on the TOGAF Standard, Version 9.2 - Phase B:

Business Architecture , which states that "The objective here is to identify candidate Architecture Roadmap components based upon gaps between the Baseline and Target Business Architectures." The Architecture Roadmap is a document

that outlines the work packages, projects, and programs required to implement the target architecture. The gaps between the Baseline and Target Business Architectures are the differences or deficiencies in the current and future states of

the business that need to be addressed by the architecture project. The other options are not correct, as they are not the basis for identifying candidate Architecture Roadmap components.

QUESTION 5

Which approach to model, measure, and analyze business value is primarily concerned with identifying the participants involved in creating and delivering value?

- A. Value networks
- B. Value chains
- C. Value streams
- D. Lean value streams

Correct Answer: A

Explanation: This answer is based on the definition and focus of value networks as "a set of roles and interactions that are necessary to create value for a customer or beneficiary". Value networks are primarily concerned with identifying the participants involved in creating and delivering value, as they show how different actors collaborate and exchange value with each other. Value networks can include both internal and external actors, such as suppliers, partners, customers, employees, regulators, etc. The other options are not correct, as they are not approaches to model, measure, and analyze business value that are primarily concerned with identifying the participants involved in creating and delivering value.
