QUESTION 1

Which two of the following use cases do you implement by using one or more calculated fields? (Choose two.)

A. A project manager wants to estimate the cost of painting a banquet hall based on labor and materials required.

B. A sales representative wants to quote the cost of an insurance policy based on selected coverage options.

C. An accountant wants to list the largest order for the last month, for each customer account.

D. A certification manager wants to determine the number of exams conducted at each testing facility in the current quarter.

Correct Answer: AB

Calculated fields are fields that derive their values from other fields or expressions. You can use calculated fields to implement use cases that require calculations based on user inputs or data sources, such as estimating costs, quoting prices,

computing discounts, etc. For example, you can create a calculated field that multiplies the labor hours by the hourly rate to estimate the labor cost for painting a banquet hall, or a calculated field that adds up the premiums for different

coverage options to quote the cost of an insurance policy.

QUESTION 2

In App Studio, when is the earliest opportunity to configure a user view for a step in a case life cycle?

A. You can configure the user view for a step any time after you configure the pick list data types.

B. You can configure the user view for a step after you create the entire case life cycle

C. You can configure the user view for a step before you start creating the case life cycle

D. You can configure the user view for a step you add that step to the case life cycle

Correct Answer: D

This answer is correct because it is the earliest opportunity to configure a user view for a step in a case life cycle in App Studio. A user view is a form that displays fields and controls for users to enter or view data related to a case or an

assignment. In App Studio, you can configure a user view for a step after you add that step to the case life cycle by clicking on the View icon next to the step name.

QUESTION 3

A manager requests a report that contains the following columns: Create Date, Case ID, Create Operator, and Work Status. You must sort the cases so the case with the most recent create date appears at the top of the list.

How do you design the report to support this requirement?

A. Select Highest to Lowest sort type for Create Date.

B. Select Lowest to Highest sort type for Create Date.

C. Make the Create Date the first column in the report.

D. Add a filter condition where Create Date is greater than the current date.

Correct Answer: A

To sort the cases so the case with the most recent create date appears at the top of the list, you need to select the Highest to Lowest sort type for the Create Date column. This will arrange the cases in descending order of their creation date.

The other options are either incorrect or irrelevant for this requirement.

QUESTION 4

Which two situations require a data type? (Choose Two)

A. A Currency drop-down is populated with values from an external system of record.

B. Patient medical history is accessed from and written to an external system of record.

C. A Work preference picklist is populated with two values: Full time and Part time.

D. A Date of account creation field is set to a default value of the current date.

Correct Answer: BC

These two situations require a data type. A data type is a reusable component that defines the structure and behavior of a set of data in your application. You can use data types to access and write data from and to external systems of

record, such as databases or web services. You can also use data types to populate fields with values from your application data, such as drop-down lists or radio buttons.

QUESTION 5

Using the Pega Express

Correct Answer: B

Using the Pega Express delivery approach, governance is established during the prepare phase of the project. The prepare phase involves setting up the project team, roles, responsibilities, tools, processes, and standards that will guide the

project delivery. Governance ensures that the project is aligned with the business objectives, follows best practices, meets quality criteria, and delivers value to the stakeholders.
