QUESTION 1

How would you define a linear process in UiPath?

A. The steps of the process refer to the execution of steps in a sequential manner, where each subsequent step depends on the successful completion of the previous step.

B. The steps of the process are performed multiple times, but each time different data items are used.

C. The steps of the process repeat multiple times over different data items. However, the automation design is such that each repeatable part processes independently.

D. The process steps are performed only once. If the need is to process additional data, then the automation must execute again.

Correct Answer: D

QUESTION 2

In the Robotic Enterprise (RE) Framework, at which point should a developer log a clear message with the Logging Level set to "Information," adhering to the best practices for automating a production-level process?

A. Whenever an exception is caught in a Catch block.

B. Whenever data is fetched from external sources.

C. Whenever an argument or value is used.

D. Whenever the robot encounters an error on a Queue Item.

Correct Answer: B

QUESTION 3

A developer defines new log fields using the Add Log Fields activity. When will the custom log fields stop being added to the robot execution logs?

A. When an Exception is caught and handled.

B. When a Remove Log Fields activity is used to remove them.

C. When a Log Message activity is executed with Log Level = Warm or higher.

D. When the first Log Message activity is executed.

Correct Answer: B

QUESTION 4

What is the purpose of credential stores in UiPath Orchestrator?

A. To store non-sensitive data and configuration settings for UiPath Studio projects.

B. To store Orchestrator event logs and related data for auditing purposes.

C. To securely store sensitive data such as Robot credentials and Credential Assets for use in automation processes.

D. To serve as a centralized location for storing pre-built automation workflows and processes.

Correct Answer: C

QUESTION 5

What happens when closing a Remote Debugging Connection while a debugging execution is in progress?

A. The remote robot continues the execution after Studio closes the connection.

B. Debugging execution ends in exception, then the connection is closed.

C. Debugging execution stops gracefully, then the connection is closed.

D. It is not possible to close the connection while debugging is in progress.

Correct Answer: D
