QUESTION 1

What do entities represent in UiPath Communications Mining?

- A. Structured data points.
- B. Concepts, themes, and intents.
- C. Thread properties.
- D. Metadata properties.

Correct Answer: A

Entities are additional elements of structured data which can be extracted from within the messages. Entities include data such as monetary quantities, dates, currency codes, organisations, people, email addresses, URLs, as well as many other industry specific categories.

QUESTION 2

What is the Machine Learning Extractor?

- A. A specialized model that can recognize multiple languages in the same document using API calls to a Hugging Face model with over 250 languages.
- B. An extraction model that can be enabled and trained in AI Center. For better accuracy, 25 documents per model are recommended to train the model.
- C. A tool using machine learning models to identify and report on data targeted for data extraction.
- D. A tool that helps extract data from different document structures, and is particularly useful when the same document has multiple formats.

Correct Answer: D

QUESTION 3

What happens during the Classify stage of the Document Understanding Framework?

- A. The OCR engine is used to extract text from the image document.
- B. The extracted data is exported as a dataset.
- C. The target fields are extracted from the document and sent to Action Center for human validation.
- D. The documents are included in one of the taxonomy document types or skipped.

Correct Answer: D

QUESTION 4

What is the primary purpose of assigning labels to verbatims within a dataset in UiPath Communications Mining?

- A. To apply labels to a maximum amount of data to enhance model performance.
- B. To provide the platform with a collection of keywords associated with each label for predicting other instances.
- C. To formulate a comprehensive training set that closely reflects the entirety of the dataset.
- D. To allocate 20 training examples for each label.

Correct Answer: C

QUESTION 5

When is ERR_AbortProcess.xaml executed?

- A. When there is an exception with a classified document.
- B. When there is an exception with a non-classified document.
- C. When a process is aborted due to a terminating exception.
- D. When an email should be sent.

Correct Answer: C
